MCOECN Cloud and Automation (VRA)

Welcome and Overview

What is the MCOECN Cloud and Automation Service Broker?

The MCOECN uses a VMWare product called vRealize Automation, or VRA, to allow ITC staff to perform self-management of your MCOECN hosted Redesign instances.

Through the VRA **Service Broker**, you can manage the Redesign suite of applications (USAS, USPS, Workflows, Inventory and ITC Management) that are hosted at MCOECN.

- Deploy new instances (production, testing, training, demo)
- Upgrade existing instances
- Remove instances
