

Create a Training Deployment of Redesign Applications

Creating the Training Deployment

Below are the steps to create the training deployment in the MCOECN Service Broker.

1. First, you must have a backup of a production deployment of Redesign to restore into the Training deployment.
 - a. If your ITC hosts Production Redesign with MCOECN, you already have nightly backups that will be used.....proceed to Step 2.
 - b. If your ITC does NOT currently host with MCOECN, but you are copying nightly backups to MCOECN for an offsite copy, you already have a backup that will be used. Proceed to Step 2.
 - c. If your ITC does NOT host with MCOECN and does not send offsite backups to MCOECN, follow the steps in Upload a Local Docker Backup to the MCOECN to get a backup of your district data to the MCOECN. When the Service Broker task below runs, it will find your backup by IRN and restore it to the new application.

2. Make sure you can log into <https://cloud.managementcouncil.org> and see "Service Broker", and the catalog items. If this is the first time your ITC is using MCOECN Hosting, we may need to create an MCOECN.ORG account for you, or grant access to the VRA portal to your existing account.

If you are having trouble logging into <https://cloud.managementcouncil.org>, you can use the Self Service website to reset your password if you have previously registered an alternative account for password recovery.
<https://selfservice.managementcouncil.org>

3. From the VRA Service Broker, run **Redesign Train** by clicking on **Request**.

Redesign Train

vRealize Orchestrator W...

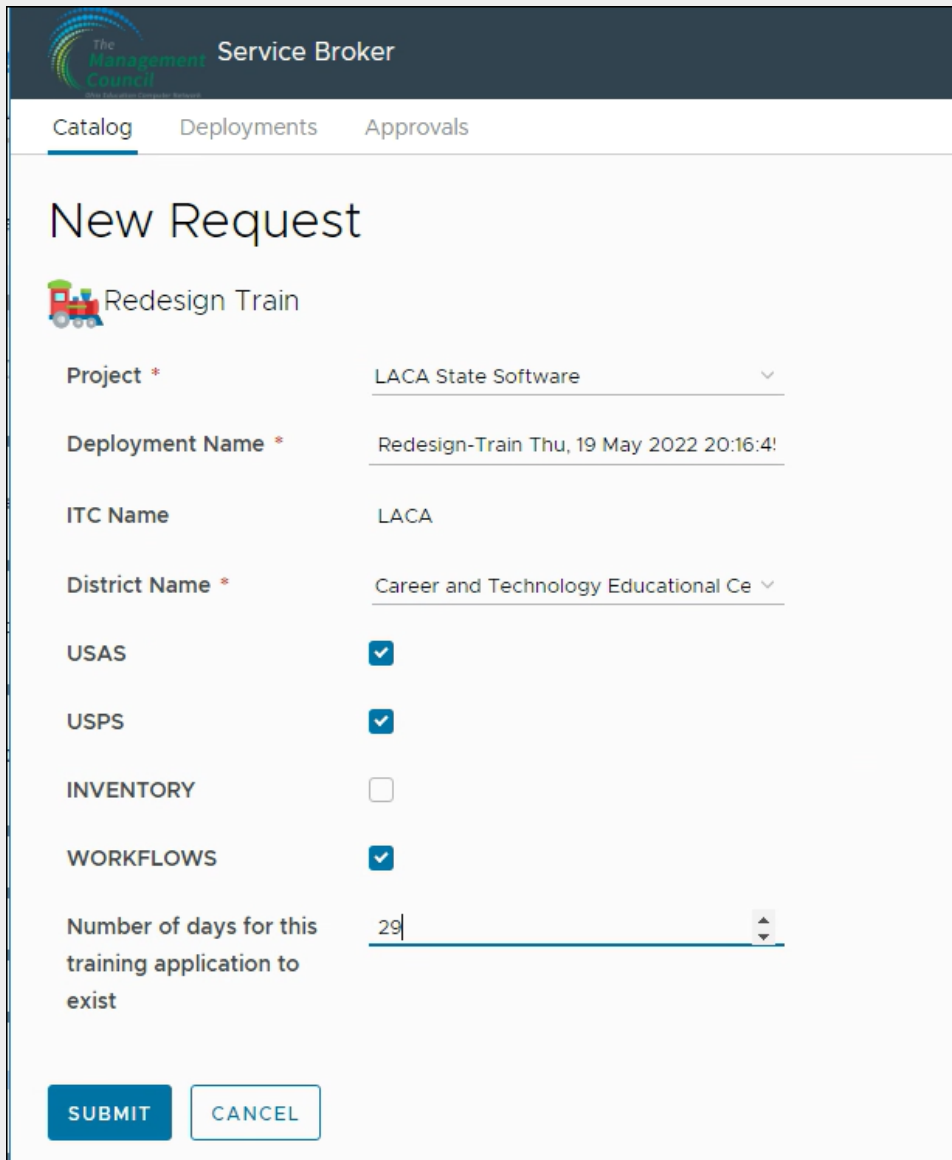

Request a training instance of any Redesign application(s). Restores last good production backup of the selected district into the training environment.

Projects:

REQUEST

4. Choose the district, and the applications you wish to deploy.

5. Set the number of days for this deployment to exist. It will be automatically removed after that future date.

The screenshot shows the 'Service Broker' interface with a dark header containing 'The Management Council' logo and 'Service Broker' text. Below the header are tabs for 'Catalog', 'Deployments', and 'Approvals'. The main content area is titled 'New Request' and features a 'Redesign Train' icon. The form includes several fields: 'Project *' with a dropdown set to 'LACA State Software'; 'Deployment Name *' with a text field containing 'Redesign-Train Thu, 19 May 2022 20:16:4!'; 'ITC Name' with a text field containing 'LACA'; 'District Name *' with a dropdown set to 'Career and Technology Educational Ce'; and four checkboxes for 'USAS', 'USPS', 'INVENTORY', and 'WORKFLOWS', with 'USAS', 'USPS', and 'WORKFLOWS' checked. A 'Number of days for this training application to exist' field has a text input with '29' and a spinner control. At the bottom are 'SUBMIT' and 'CANCEL' buttons.

6. The **Redesign Train** item will:
- Find your backup file by the IRN
 - Automatically create a new deployment of USAS/USPS/INVENTORY/WORKFLOWS
 - Will restore your backup into the new deployment
 - Will email you a notice when the task is complete (**takes about 10 minutes per application**).
7. The completion email will have the URL to your new application included.
You will be able to log in with the same username/password combinations you use in your production deployment, since you restored from the same production database.

If you connect your local Redesign applications to your own ITC's Active Directory, you will need to allow LDAP access from the MCOECN hosted environment to your local Active Directory server(s) through your ITC firewall.

All LDAP requests from the MCOECN Hosted applications will come from source IP address :

208.108.246.14

This only needs to be completed one time per ITC.
